

HOW DO YOU CLEAN UP ENERGYSM ?

IT TAKES AMAZING PEOPLE, LIKE...

Alan Luwe

Director of Environmental Compliance & Regulatory Affairs

Q. What is your primary responsibility at Milestone?

I have oversight on permitting and am primarily responsible for reporting and other interaction with regulatory agencies and clients, including audits of our facilities. I also advise on current and pending environmental regulation in our industry, am a member of our sustainability reporting team, and work with our business development group to evaluate new opportunities and ventures.

Q. Why is maintaining environmental excellence important?

Milestone has a strong record of environmental performance and operational excellence. Our facilities are designed to achieve maximum results with minimal environmental impact. According to customers, this is paramount over our competitors. It allows us to minimize and mitigate potential hazards, thus sending our teams home safely.

Q. In what ways does Milestone build on its environmental reputation?

We consistently complete annual reviews of our compliance programs, including quarterly environmental audits, monthly interactions with operations management and supervisors, monthly/quarterly calls and meetings with regulatory agency representatives, and bi-weekly reviews of our environmental management system.

Q. What impact would you like to make at Milestone in the next five years?

We are moving to a more robust and diverse portfolio of services, which will require scalable management systems to ensure continued success. I want to support and be part of that. What separates great companies from good ones is the ability of great companies to foresee operational challenges and have the programs in place to mitigate them.

Q. How does Milestone contribute to a sustainable future?

Operational excellence. Our combination of class II slurry injection operations and carbon sequestration activities provide a cleaner solution for waste disposal and emissions reduction. In FY 2021 we sequestered over 200,000 metric tons of CO₂ equivalent and are on track to double that number in FY 2022.

Q. What do you find most rewarding about your career at Milestone?

Milestone has built an excellent team across all parts of the organization. I am excited to be involved in responsibly supporting the waste needs of the various oilfield markets, while also giving back to local communities in which we operate.
