

HOW DO YOU CLEAN UP ENERGYSM ?

IT TAKES AMAZING PEOPLE, LIKE...

Carolina Ortega
Vice President of Sustainability

Q. What are you most passionate about when it comes to sustainability?

I am a storyteller at heart. I love to develop the unique story about sustainability at Milestone – what makes Milestone different and how our sustainability efforts differentiate us from other companies.

Q. How can Milestone help customers achieve their net-zero goals?

Milestone reinjects the slurry waste that our customers bring to our facilities. Thanks to our proprietary technology, we can sequester the waste and prevent greenhouse gas (GHG) emissions that are harmful for the environment. Moreover, the carbon we sequester from our customers' waste can be reflected in their GHG inventories as reductions in scope 3 emissions, or as avoided emissions.

Q. What approach do you take to elevate sustainability at Milestone?

I work hard to tell the unique story of how sustainability is at the core of our business model, and how sustainability is a key driver of our financial success.

Q. How do Milestone's sustainability efforts compare to industry competitors?

The key difference is that, by injecting slurry, Milestone sequesters the potential CO₂e in the waste and helps avoid emissions that would otherwise occur with onsite burial or bioremediation. This creates value for our customers and benefits the environment.

Q. How would you describe Milestone's overall environmental impact?

Just like our mission states, we 'Clean Up Energy'. We help ensure that the waste management phases of the E&P lifecycle are cleaner than ever.

Q. What is something about Milestone that you wish everyone knew?

The level of rigor that goes into our carbon data collection efforts is top of the line. Our 2022 Sustainability Report reflects our disciplined approach to ESG reporting and I'm excited for customers and industry to see what we've done.
